Red Hat OpenShift

A Modern Application Platform

Imagine a world where your applications are built, deployed, and managed with unparalleled speed, efficiency, and security. That world is achievable with OpenShift, a comprehensive and trusted application platform. As a leading solutions provider, Island Networks can empower your business to harness the full potential of OpenShift and transform your operations.

At the heart of OpenShift lies a dependable and secure container engine, built on the industry-leading Red Hat Enterprise Linux (RHEL). This foundation provides a robust and reliable platform for running mission-critical applications. With Red Hat's Kubernetes engine, you can automate deployment, upgrades, and scaling, streamlining your operations.

Beyond the container engine, OpenShift offers a full suite of tools and services to boost developer productivity, security, and compliance. From building container images with Universal Base Images (UBI) to utilising pre-validated capabilities from our extensive ISV ecosystem, OpenShift delivers a streamlined and efficient development experience.

Moreover, OpenShift offers a consistent hybrid cloud experience, enabling you to deploy and manage applications across data centres, public clouds, and edge environments. This flexibility empowers businesses to scale their operations and meet evolving customer demands.

With OpenShift, Island Networks can assist your business in unlocking the full potential of their applications and drive business success.

Benefits

By choosing OpenShift, Island Networks can deliver a trusted, comprehensive, and consistent application platform to your business. This will enable you to:

Boost Innovation
Rapidly build and deploy new applications to meet market needs.

Improve Efficiency
Streamline operations and cut down time-to-market.

Enhanced Security
Protect critical applications with a robust and secure foundation.

Lower Operational Overhead
Automate tasks and simplify management.

Why Island Networks?

Island Networks is a global systems integrator and digital transformation provider. We specialise in delivering digital, hybrid, and security solutions to large organizations across the US, Europe, and Asia. Our expertise enables us to help reduce the complexity, risks, and costs associated with digital and hybrid transformation.
